

The Relationship Between Alfvén Waves and Rotational Discontinuities from 1 to 5 AU: Ulysses

J. S. Mok, B. T. Tsurutani, E J. Smith, C. 110, B. E. Goldstein and
M. Neugebauer, (All at: Jet Propulsion laboratory, California
Institute of Technology, Pasadena, CA 91109; tel. 818 354-7559)
A. Balogh and D. J. Southwood, (Both at: Imperial College of Science
and Technology, The Blackett Laboratory, Mince Consort Road,
London SW72 BZ, England)
W. C. Feldman, Los Alamos National Laboratory, Los Alamos, New
Mexico 87545

We find the presence of many rotational discontinuities within
Alfvén wave trains in interplanetary space. High resolution field and plasma
data will be used to examine these relationships in detail.
We will also examine the Alfvén wave/rotational discontinuity
interrelationship as a function of radial distance, as the Ulysses
spacecraft travels from 1 to 5 AU.
